

Azure Gateway CDN

Step 1: Deployment Completed

Azure deployment completed successfully.

Step 2: Open Resource Group

Open the resource group containing all resources.

Step 3: Verify Virtual Network

Verify the VNet configuration.

The screenshot shows the Microsoft Azure portal interface. The left sidebar contains a navigation menu with options like Overview, Virtual network, Virtual Network overview, Virtual networks (selected), NAT gateways, Public IP addresses, Network interfaces, Network security groups, Application security groups, Bastions, Route tables, Route servers, Private Link, DNS, and Monitoring and management. The main content area displays the 'Virtual networks' page for 'vnet-appgw'. It includes a search bar, a filter bar with 'Subscription equals all', 'Resource Group equals all', and 'Location equals all', and a table of virtual networks. The table has columns for Name, Resource Group, Location, and Subscription. One entry is visible: 'vnet-appgw' in the 'rg-appgw-lab' resource group, located in 'Korea Central', under the 'Azure for Students' subscription. The bottom of the page shows 'Showing 1 - 1 of 1. Display count: auto' and a 'Give feedback' link.

Name	Resource Group	Location	Subscription
vnet-appgw	rg-appgw-lab	Korea Central	Azure for Students

Step 4: Check Subnets

Review frontend/backend subnets.

The screenshot shows the Microsoft Azure portal interface for the 'vnet-appgw' virtual network. The left sidebar contains a navigation menu with options like Overview, Activity log, Access control (IAM), Tags, Diagnose and solve problems, Resource visualizer, Settings, Address space, Connected devices, Subnets (selected), Bastion, DDoS protection, Firewall, Microsoft Defender for Cloud, and Network manager. The main content area displays the 'Subnets' page for 'vnet-appgw'. It includes a search bar, a filter bar with 'Subscription equals all', 'Resource Group equals all', and 'Location equals all', and a table of subnets. The table has columns for Name, IPv4, IPv6, Available IPs, Delegated to, and Se. Two entries are visible: 'appgw-sub...' with IPv4 '10.0.0.0/24' and 'availability ...' available IPs, and 'backend-s...' with IPv4 '10.0.1.0/24' and '249' available IPs. The bottom of the page shows 'Showing 2 subnets' and a 'Give feedback' link.

Name	IPv4	IPv6	Available IPs	Delegated to	Se
appgw-sub...	10.0.0.0/24	-	availability ...	-	-
backend-s...	10.0.1.0/24	-	249	-	-

Step 5: Verify Virtual Machines

Confirm vm1 and vm2 are running.

The screenshot shows the Microsoft Azure portal interface. The left sidebar contains navigation links for Overview, All resources, Infrastructure, Virtual machines, Virtual Machine Scale Set (VMSS), Compute Fleet, Arc Machines, Disks + images, Capacity + placement, Related services, Monitoring + Operations, and Help. The main content area is titled 'Compute infrastructure | Virtual machines' and shows a table of virtual machines. The table has columns: Name, Subscription, Resource Group, Location, Status, Operating system, Size, Public IP address, and Disks. Two virtual machines are listed: vm1 and vm2. Both are running on Linux, with a size of Standard_B2ats... and a public IP address of 20.196.153.119 and 20.196.139.24 respectively. The status for both is 'Running'.

Name	Subscription	Resource Group	Location	Status	Operating syst...	Size	Public IP address	Disks
vm1	Azure for Stud...	RG-APPGW-LAB	Korea Central	Running	Linux	Standard_B2ats...	20.196.153.119	1
vm2	Azure for Stud...	RG-APPGW-LAB	Korea Central	Running	Linux	Standard_B2ats...	20.196.139.24	1

Step 6: Connect to VM1

Use Native SSH details for vm1.

The screenshot shows the Microsoft Azure portal interface for connecting to a virtual machine. The left sidebar contains navigation links for Overview, Activity log, Access control (IAM), Tags, Diagnose and solve problems, Monitor, Resource visualizer, Connect, Bastion, Networking, Network settings, Load balancing, Application security groups, and Network manager. The main content area is titled 'vm1 | Connect' and shows the 'Native SSH' connection method. The 'Source machine' section shows 'Source machine OS' as Windows and 'Source IP address' as Local IP | 61.246.17.220. The 'Destination VM' section shows 'VM IP address' as Public IP | 20.196.153.119 and 'VM port' as 22. The 'Connection prerequisites' section shows 'VM access' as 'Check inbound NSG rules'. The 'SSH command' section shows the command 'ssh -i <private-key-file-path> azureuser@20.196.153.119'.

Native SSH

Source machine

Source machine OS: Windows

Source IP address: Local IP | 61.246.17.220

Destination VM

VM IP address: Public IP | 20.196.153.119

VM port: 22

Connection prerequisites

VM access: Check inbound NSG rules

SSH command

Execute in your choice of local shell: `ssh -i <private-key-file-path> azureuser@20.196.153.119`

Step 7: Connect to VM2

Use Native SSH details for vm2.

Step 8: Browser Output VM1

Verify Hello from VM1 page.

Step 9: Browser Output VM2

Verify Hello from VM2 page.
